Youssef Tijani

youssef.tijani@outlook.com | Morocco | Software Engineer

Dear QuantCo Hiring Team,

I am applying for the Software Engineer opportunity at QuantCo. I am a software engineer with a project-based computer science background from 1337, part of the 42 Network, and around one and a half years of professional experience across freelance development and a software engineering internship. I enjoy building practical software, understanding problems carefully, and improving a solution until it is reliable and useful.

In my freelance work, I have built full-stack applications based on client requirements, working across frontend interfaces, backend services, and REST APIs. My experience includes Python, TypeScript and JavaScript, React and Next.js, FastAPI, and PostgreSQL. I have also integrated AI and language-model capabilities into applications, while keeping the underlying software structure and data access in mind.

During my internship with the Leet Alumni Platform, I was the main frontend contributor to a platform connecting current students and alumni. I worked on features such as profiles, an alumni directory, messaging, and job-related functionality, and collaborated with others to connect the interface to backend APIs. That experience taught me to take ownership of a feature, communicate clearly, and think beyond the code to how people actually use a product.

My training at 1337 has also given me sustained practice with programming fundamentals and hands-on projects involving C, C++, systems programming, networking, and web development. I am currently studying linear regression from first principles through the ft_linear_regression project, which is helping me strengthen my understanding of mathematical modelling and optimization. I would bring curiosity, persistence, and a willingness to learn from experienced engineers to the QuantCo team.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and project-based training could contribute to QuantCo.

Kind regards,
Youssef Tijani
